Summary

Results-driven Full-Stack Software Engineer with 3.5+ years of experience architecting and deploying scalable web, mobile, and distributed IoT applications. Expert in the React/TypeScript ecosystem (Next.js, React Native) and robust backend development utilizing Node.js (NestJS), Python (Django/Flask), and Java. Proven track record of leading technical migrations, automating CI/CD pipelines, and driving feature delivery in high-scale environments (4M+ users). Adept at working in global, remote English-speaking environments with a strong focus on software craftsmanship, Clean Architecture, and SOLID principles.

Skills

Frontend: React, Next.js, TypeScript, JavaScript, Tailwind CSS, HTML, CSS

Mobile: React Native, Expo

Backend: Node.js, NestJS, Express.js, Python, Django REST Framework, Flask, Java, Spring Boot, REST API Design

Databases: PostgreSQL, MongoDB, MariaDB, Redis, InfluxDB

DevOps & Cloud: Docker, Docker Compose, GitHub Actions, CI/CD Pipelines, Nginx, AWS, GCP, Linux, Bash

Testing: Jest, Cypress, TDD, API Testing, Postman

Architecture: Clean Architecture, SOLID, Microservices, Event-Driven Architecture, Message Queues, Caching Strategies

Tools & Workflow: Git, GitFlow, Scrum/Agile, Figma, Overleaf, LaTeX

Experience

Natoora

London, United Kingdom (Remote)

Lead Full-Stack Engineer

Jan 2025 – Present

- **Spearheaded full-stack feature delivery** for a global food-tech ecosystem, cross-functionally coordinating requirements between product owners, UI/UX designers, and engineering squads.
- **Architected and managed production-ready features** using React, React Native, TypeScript, and Python (Django/Flask) across business-critical internal systems and user-facing applications.
- **Led the migration of legacy Angular applications** to modern React architectures, drastically reducing technical debt, increasing component reusability, and boosting long-term development velocity. **Designed, extended, and optimized secure REST APIs** to ensure low-latency data synchronization between distributed backend systems and frontend client interfaces.
- **Engineered automated CI/CD workflows** via GitHub Actions, significantly cutting down deployment friction and increasing automated testing reliability across environments.
- **Collaborated directly with UK-based Product Managers** and design stakeholders to translate high-fidelity Figma prototypes into high-performance user interfaces.
- **Refactored critical legacy codebases** while maintaining continuous feature delivery, effectively balancing fast-paced shipping cycles with system health and maintainability.

Curseduca / Waid

São Paulo, Brazil (Remote)

Full-Stack Engineer

Sep 2024 – Jan 2025

- **Engineered core features for high-traffic React Native and Next.js platforms** serving over 4 million active users in the educational technology sector.
- **Optimized full-stack architecture** across mobile, web, and backend layers, enhancing overall application performance and platform reliability during high-concurrency peaks.
- **Resolved Tier-3 production infrastructure incidents**, maintaining strict SLA compliance, application stability, and maximum system availability.
- **Designed and executed automated data migration scripts**, ensuring safe, zero-data-loss transitions from legacy databases to modern storage architectures.

- **Implemented comprehensive unit testing suites** using Jest, decreasing regression risks, and increasing deployment confidence during release cycles.

2RP Net
Full-Stack Engineer

São Paulo, Brazil (On-site)
Dec 2022 – Nov 2024

- **Built a robust web data-analytics portal** using Next.js and Tailwind CSS, enabling corporate clients to visualize and interact with complex machine learning-driven models.
- **Developed a mobile-optimized inventory management application**, prioritizing asynchronous data fetching, ultra-responsive layouts, and high usability under unstable network conditions.
- **Created interactive front-end prototypes** in Figma to align technical workflows with business goals, improving communication between stakeholders and engineers.
- **Authored comprehensive technical documentation** using LaTeX and Overleaf, creating a centralized, standardized repository for system architectures and maintainability.
- **Facilitated internal technical workshops** on advanced React patterns and state management, accelerating the onboarding and mentoring of junior developers and interns.

Projects

MundoBee (Smart IoT Platform)

NestJS, Next.js, MQTT, ESP32, MariaDB, Docker, Nginx

- **Won 1st Place at COMBRAPI 2024** (Brazilian Conference of Beekeeping). Architected an end-to-end IoT platform for real-time smart beehive telemetry. Implemented high-frequency data ingestion via MQTT, containerized services with Docker Compose, used Nginx as a reverse proxy, and built an analytics dashboard in Next.js.

Full-Stack E-commerce Platform

Next.js, Python (Django), PostgreSQL, Tailwind CSS, Docker

- Developed a full-featured e-commerce ecosystem incorporating JWT-based user authentication, dynamic product inventory management, secure checkout flows, and database scaling using PostgreSQL.

27Box Educational Portal

TypeScript, Python, Next.js, Django REST Framework

- Engineered an academic management portal based on the 9-Box talent assessment methodology, bridging a Next.js front-end with robust, authenticated Django REST APIs.

Education

UniSENAI Sorocaba
Associate of Science (AS) in Systems Analysis and Development

Sorocaba, Brazil
Graduate – 2024

Languages

Portuguese: Native

English: Advanced / Fluent (C1 Level) – Comfortable leading technical meetings, writing documentation, and working in native English-speaking squads.

Volunteering

Rotaract Sorocaba

2023 – 2024

- Led and participated in community crisis response initiatives, including coordinating clothing donation campaigns for Rio Grande do Sul flood victims and organizing fundraising with Rotary international partners.
